Order Dermoptera, Family Cynocephalidae, Genus *Cynocephalus*

The 1-2 kg, nocturnal flying lemurs (*Cynocephalus variegatus, C. volans*) glide through the tropical rainforest of southeast Asia seeking fruit, young shoots, and leaves. The sexes are often dimorphic with respect to color. The hemochorial, labyrinthine or discoidal (7563, 10310) placenta has a superficial, antimesometrial, eccentric (7563) implantation into a duplex uterus (11164). Females have 2 pair of auxillary teats (7161, 11611). Copulation can occur during lactation (11833a) and lactation can occur concurrently with gestation (7161).

NEONATAL MASS		
Cynocephalus volans	35.8 g; near term	11833a
NEONATAL SIZE		
Cynocephalus volans	max 254 mm	281a
LITTER SIZE		
Cynocephalus variegatus	1	7161
	1 yg; n1 f	557
	1 yg; n1 f	2313
Cynocephalus volans	1	11611
	1	11833a
	1 yg	988a
GESTATION		
Cynocephalus variegatus	~8 wk	6369
Cynocephalus volans	est 150 d	11833a
LACTATION		
Cynocephalus volans	dependent: ~200 d	11833a
